

Industrial Internship Report

Banking Information System

Student

Sahithya Ponnamm

Executive Summary

This internship project developed a Java-based Banking Information System featuring account creation, deposits, withdrawals, transfers, transaction history, validation, and file persistence using object-oriented programming.

Problem Statement

Develop a secure and user-friendly console banking application to manage customer accounts and banking transactions.

Proposed Solution

A Java console application using OOP, ArrayList, file handling, exception handling, and modular classes to manage banking operations.

Modules

Admin Login, Account Management, Deposit, Withdrawal, Transfer, Transaction History, Interest Calculator, File Persistence.

Testing

All major banking operations were tested with valid and invalid inputs. Input validation and exception handling were verified.

Learning Outcomes

Improved Core Java, OOP, Collections, File Handling, Exception Handling, Git, and problem-solving skills.

Future Scope

Database integration, GUI, online banking APIs, OTP authentication, and mobile application support.
